

Like Normal
Distribution, But
Completely Different...

CUSTOM DEVICE DEPLOYMENTS

Deploying devices such as smartphones or wearables for custom solutions can stretch the capabilities of traditional distributors. From complex software set-up and integration with disparate systems to custom packaging and kitting – the requirements often call for unique workflows and skill sets.

Many of our clients have seen substantial benefits (both economic and environmental) from incorporating value recovery into the process from the beginning. Our solutions address the entire life cycle, allowing for the return, testing and redeployment of the devices.

Our processes are natively circular and uniquely capable of meeting the requirements of complex deployments.

Project Management & Custom Workflows

Every deployment is unique. We take a consultative approach to solve hard problems and deliver solutions that work for our clients and the end users.

Configuration & Personalization

We can make sure the devices arrive fully configured and ready to go for the user including any necessary personalization.

Tech-Assisted Quality Control

Custom designed optical recognition processes can be employed to ensure complete accuracy.

Redeployment Services

We can handle all aspects including return shipping label generation, tracking, receiving, testing and inventory management.

Refurbishment & Repair

We can perform cosmetic refurbishment and an array of repair services to keep devices in service and reduce costs.

Value Recovery

We can buy-back deployed devices to reduce total cost of ownership. Our easy process maximizes participation and total value recovered.
