Dedicated Onsite Teams Ensure Complete Data Destruction

DATA CENTER DECOMMISSIONING – ONSITE SERVICES

Reconext provides turnkey onsite services for data center decommissioning to make the process of retiring equipment simple, secure, and headache-free. Our teams of highly trained, vetted specialists will travel to your data center location to fully manage and execute the process. We understand that data security is paramount, so our experienced team members will perform a certified data wipe using our custom designed equipment for every data containing device before it leaves the building. Certificates of erasure will be provided for every unit.

Our full range of services includes tear down and dismantling of racks, tagging and tracking all equipment, secure data erasure, packing of devices and overseeing secure pickup and transportation of the devices to ensure a complete chain of custody.

You'll have complete transparency throughout the process with robust tracking and reporting for every move. Our teams can communicate directly with designated contacts within your organization to issue pre-alerts for services, establish connectivity to Engineering for NPI as needed and provide documentation transfer for sign-off release.

Highlights
- Global coverage
- Ability to erase to NIST or any global standard
- Certificates of erasure for every device
- Complete chain of custody tracking
- Secure tracked logistics
- Onsite shredding for devices that fail data erasure
- Tool kits to support all onsite requirements
- Onsite teams are highly trained, experienced Reconext employees
- Maximum value recovery
